DETAILED ACTION

This application is a 371 of PCT/KR00/00026. The amendment filed on July 8,
2003, canceling claims 3-5, has been entered.

Claims 1-2 are pending.

Election/Restrictions

Applicant's election of Group I (claims 1-2) in Paper No. 12 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1-2, the mere recitation of the name "VHb-DAAO" is insufficient to convey with clarity that which applicant sees as the invention.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Khang et al. in view of Huston et al.

Khang et al. (cited on previous PTO-892) teach co-expression of a D-amino acid oxidase (DAO) and *Vitreoscilla* hemoglobin (VHb) in *Escherichia coli* (page 43). A vector comprising both genes was constructed so that VHb may aid in dissolving the oxygen-limitation problem in immobilizing the DAAO enzyme. It is well known in the art that VHb can be applied to enhance protein production levels (Frey et al., form PTO-892) and that VHb in *E. coli* is introduced to *E. coli* to improve oxygen utilization by the cells, to obviate the problem of oxygen limitation in large-scale bioreactor cultivations in recombinant protein productions.

The difference between the reference of Khang et al. and the instant invention is that the reference of Khang et al. does not teach a fusion protein comprising the DAAO and VHb proteins.

Huston et al. (cited on previous form PTO-892) teach how to make fusion proteins.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the claimed invention was made to make a fusion protein comprising a DAAO

Art Unit: 1652

and VHb proteins. The motivation of making a fusion protein is to facilitate co-expression of the two proteins so that VHb may aid in solving the oxygen-limitation

problem in the immobilized DAAO enzyme. One of ordinary skill in the art would have had a reasonable expectation of success since making fusion proteins are well known in the art.

No claims are allowed.
